How to create a popup window (PopupWindow) in Android

Asked 8 years, 11 months ago Active 1 month ago Viewed 198k times

To create a simple working PopupWindow, we need to do the following:

49

popup_example.xml:

25

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:orientation="vertical"
    android:padding="10dip"
    android:layout_width="fill_parent"
    android:layout_height="wrap_content">

    <TextView
        android:layout_width="fill_parent"
        android:layout_height="wrap_content"
        android:layout_marginTop="10dip"
        android:text="Test Pop-Up" />
```

Join **Stack Overflow** to learn, share knowledge, and build your career.

[Sign up with email](#)[Sign up with Google](#)[Sign up with GitHub](#)[Sign up with Facebook](#)

```
LayoutInflater inflater = (LayoutInflater)
this.getSystemService(Context.LAYOUT_INFLATER_SERVICE);

PopupWindow pw = new PopupWindow(inflater.inflate(R.layout.popup_example, null,
false),100,100, true);

pw.showAtLocation(this.findViewById(R.id.main), Gravity.CENTER, 0, 0);
```

My requirement is that I need a

```
<TEXTVIEW android:layout_height="wrap_content" android:layout_width="fill_parent" />
```

and a

```
<BUTTON android:id="@+id/end_data_send_button" android:text="Cancel"/>
```

in my popup_example.xml . How can I handle these two components in my Java code?

6 Based on what you are showing, these probably should be a Dialog and not a PopupWindow. – Mike dg Feb 22 '12 at 12:17

3 ... now more than ever being that DialogFragments are available developer.android.com/guide/topics/ui/dialogs.html – samis Dec 3 '12 at 14:00

Hey, can i use the pop-up window to show an enlarged image(on click of the image) that is dynamically being shown in a listview? Thanks. – Kaveesh Kanwal Apr 22 '15 at 17:14

Here , I am giving you a demo example . See this and customize it according to your need.

66

```
public class ShowPopUp extends Activity {
```

```
    PopupWindow popUp;
    LinearLayout layout;
    TextView tv;
    LayoutParams params;
    LinearLayout mainLayout;
    Button but;
    boolean click = true;
```

```
@Override
public void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    popUp = new PopupWindow(this);
    layout = new LinearLayout(this);
    mainLayout = new LinearLayout(this);
    tv = new TextView(this);
    but = new Button(this);
    but.setText("Click Me");
    but.setOnClickListener(new OnClickListener() {
```

```
    public void onClick(View v) {
```

[Sign up with Facebook](#)

```
        popUp.dismiss();
        click = true;
    }
}

});
params = new LayoutParams(LayoutParams.WRAP_CONTENT,
    LayoutParams.WRAP_CONTENT);
layout.setOrientation(LinearLayout.VERTICAL);
tv.setText("Hi this is a sample text for popup window");
layout.addView(tv, params);
popUp.setContentView(layout);
// popUp.showAtLocation(layout, Gravity.BOTTOM, 10, 10);
mainLayout.addView(but, params);
setContentView(mainLayout);
}
}
```

Hope this will solve your issue.

▲ How to make a simple Android popup window

55

This is a fuller example. It is a supplemental answer that deals with creating a popup window in general and not necessarily the specific details of the OP's problem. (The OP asks for a cancel button, but this is not necessary because the user can click anywhere on the screen to cancel it.) It will look like the following image.

Make a layout for the popup window

Add a layout file to `res/layout` that defines what the popup window will look like.

popup_window.xml

```
<?xml version="1.0" encoding="utf-8"?>
<RelativeLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:background="#62def8">

    <TextView
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_centerInParent="true"
        android:layout_margin="30dp"
        android:textSize="22sp"
        android:text="This is a popup window."/>

</RelativeLayout>
```

Inflate and show the popup window

Here is the code for the main activity of our example. Whenever the button is clicked, the popup window is inflated and shown over the activity. Touching anywhere on the screen dismisses the popup window.

MainActivity.java

```
public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
    }
}
```

Sign up with Facebook

```
// create the popup window
int width = LinearLayout.LayoutParams.WRAP_CONTENT;
int height = LinearLayout.LayoutParams.WRAP_CONTENT;
boolean focusable = true; // Lets taps outside the popup also dismiss it
final PopupWindow popupWindow = new PopupWindow(popupView, width, height,
focusable);

// show the popup window
// which view you pass in doesn't matter, it is only used for the window token
popupWindow.showAtLocation(view, Gravity.CENTER, 0, 0);

// dismiss the popup window when touched
popupView.setOnClickListener(new View.OnClickListener() {
    @Override
    public boolean onTouch(View v, MotionEvent event) {
        popupWindow.dismiss();
        return true;
    }
});
}
```

That's it. You're finished.

Going on

i don't know why, but when i use method showAtLocation, my custom layout in inflater not working. Result such on your screenshot – [Tony](#) Aug 19 '19 at 10:05

@MartinezToni, I'm not sure why either. – [Suragch](#) Aug 19 '19 at 13:26

very nice and thoughtful response! thank you for posting this – [eric](#) Dec 16 '19 at 19:15

context.getSystemService(Context.LAYOUT_INFLATER_SERVICE); for accessing via public class. :) – [DragonFire](#) Jan 28 at 2:09

are you done with the layout inflating? maybe you can try this!!

7

```
View myPoppyView = pw.getContentView();
Button myBelovedButton = (Button)myPoppyView.findViewById(R.id.my_beloved_button);
//do something with my beloved button? :p
```

4

```
Button endDataSendButton = (Button)findViewById(R.id.end_data_send_button);
```

Similarly you can get the text view by adding a id to it.
